Q: What is the most patented device in U.S. History?

A: The Mouse Trap

Facts: There have been over 4,400 patents filed for the mouse trap since the patent office opened in 1838.

Only about 12 of which have ever actually made money on a commercial scale.

The Act of Trap Checking:

- will NOT prevent an outbreak
- will NOT resolve an issue
- does little to protect your brand

DynamicIPM® is NOT Trap Checking

- it IS protecting your brand
- it IS prevention through early detection
- it IS using technology to resolve problems

Fact: The cost of the average product recall is $10,000,000

Q: When does a better mouse trap actually become a better mouse trap?

A: When it checks itself

The automation process improves:

- Client Transparency
- Technician Ergonomics and Efficiency
- Time Savings
- Time Stamped Activity

With Analog “Conventional” IPM Programs you pay for time to check devices.

FACT: 98% of our rodent monitoring devices had ZERO rodent activity when checked.
