

ADAPTIVE SAMPLING: RISK-BASED ENVIRONMENTAL MONITORING

May 14, 2025 | Hannes Pouseele

OVERVIEW

- **THE FACTORY: A LIVING SYSTEM ...**
- **... WITH A MICROBIAL RISK**
 - What is risk?
 - How do we measure and model it?
 - How do we improve observing the factory microbial state?
 - How do we respond to issues?
- **ADAPTIVE SAMPLING:**
reduce risk and **maximize resource efficiency**

MICRO RISKS IN THE FACTORY ENVIRONMENT

ENVIRONMENTAL MONITORING: A RISK MAP

observing the microbial state of the factory where is it hot? where is it cold?

ENVIRONMENTAL SAMPLING: A SNAPSHOT

measuring the microbial state of specific locations at specific times

- Where do I look?
- How often do I look?
- How many samples can I afford?
- What action do I take?

FROM A SNAPSHOT TO A RISK MAP?

How does a limited set of samples inform me about the factory state as a whole?

WHAT CONSTITUTES RISK?

RISK: THE LIKELIHOOD OF SOMETHING HAPPENING

~~Severity: if something happens, how bad is it?~~

Estimated risk

How likely is an out-of-spec occurring?

- Positivity rate ...
- For a location that never tested positive, is there zero risk?

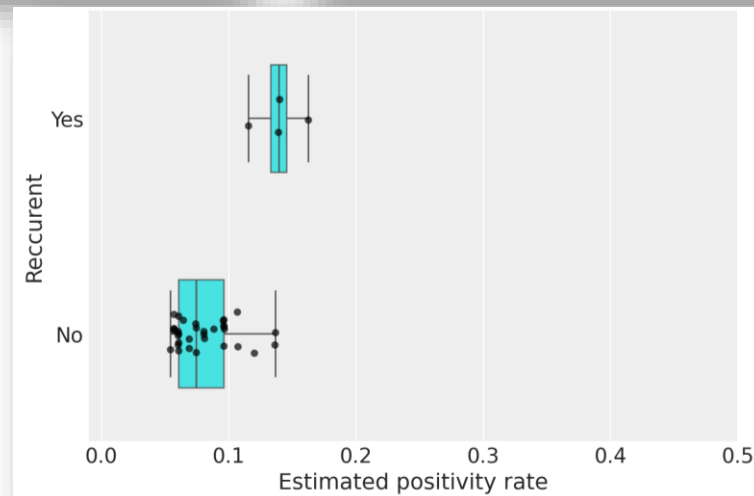

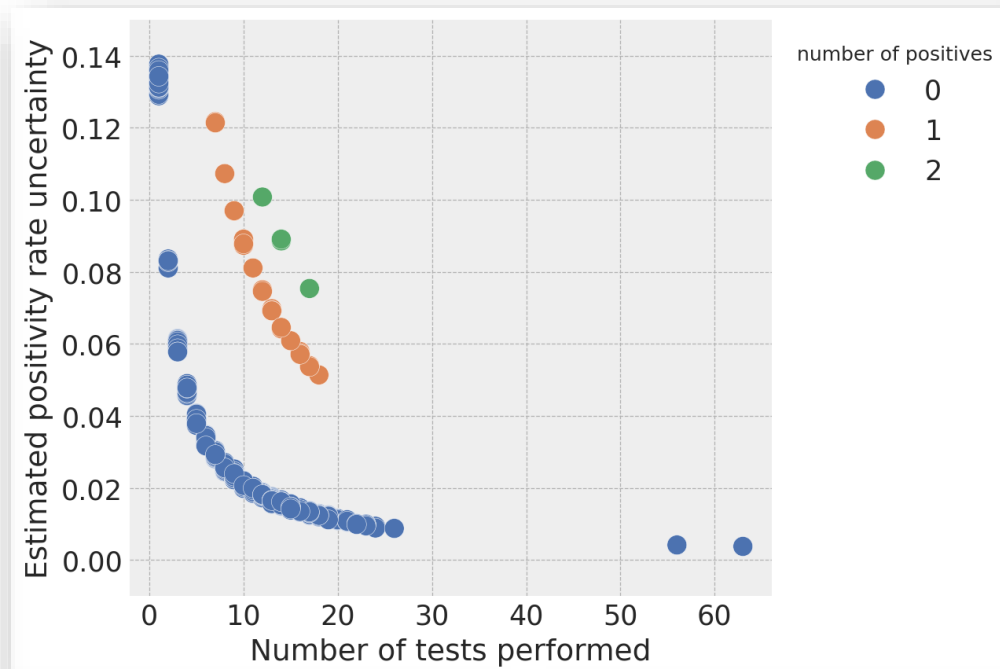

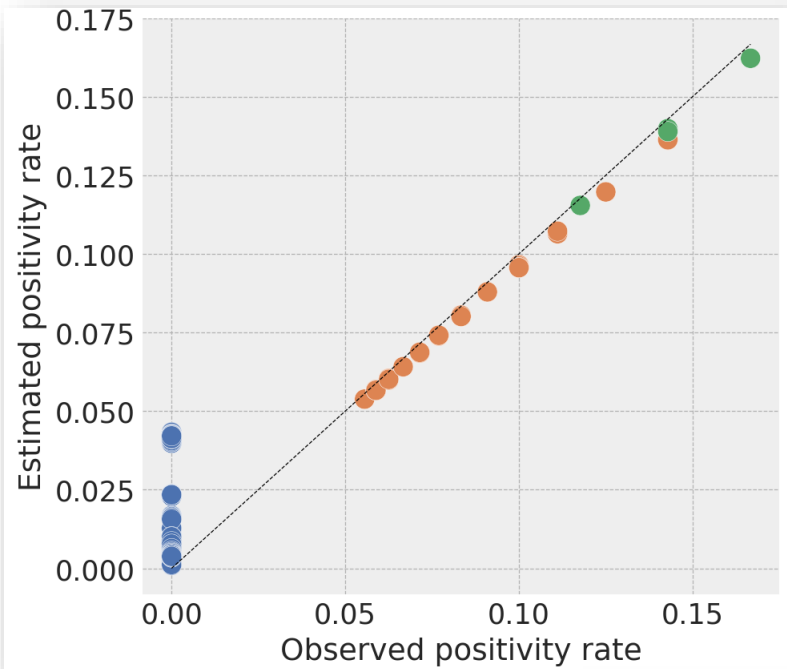

Uncertainty of the estimate

How certain are we about our estimate?

- If we measure location A once a month and location B once a week, are we equally certain about the result?

MODEL vs. REALITY

VALUE AT RISK

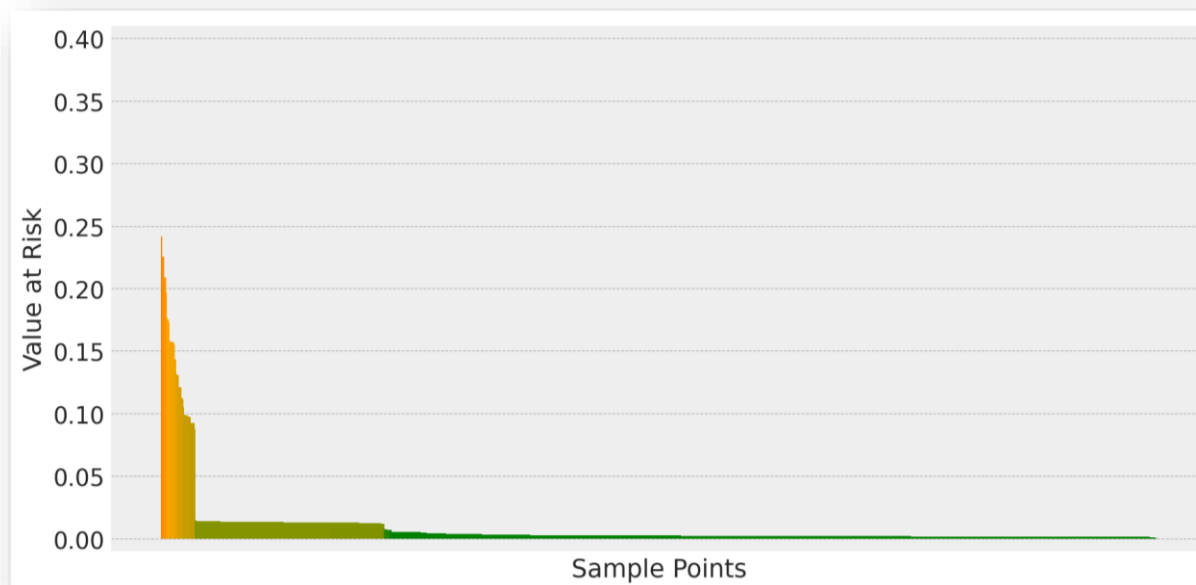

RISK: THE LIKELIHOOD OF SOMETHING HAPPENING

ESTIMATED RISK

UNCERTAINTY OF THE ESTIMATE

VALUE AT RISK

How bad does it get on a “usual” day?

REMAINING RISK AND SAMPLING OPTIMIZATION

YEAST & MOLD
RISK IN BEVERAGE
PLANT

REMAINING RISK: HOW MUCH OF THE VALUE AT RISK IS UNOBSERVED?

$$\sum_{\text{sampling points}} \text{sampling frequency} * \text{value at risk}$$

By modifying sampling frequency, we **minimize the risk** while controlling for the sampling volume.

MIGRATION

HOW DO MICRO PROBLEMS MOVE THROUGH THE FACTORY?

Relative importance of different transmission mechanisms

EXPLORATORY SAMPLING

RISK PROPAGATION THROUGH MIGRATION INFORMS EXPLORATORY SAMPLING

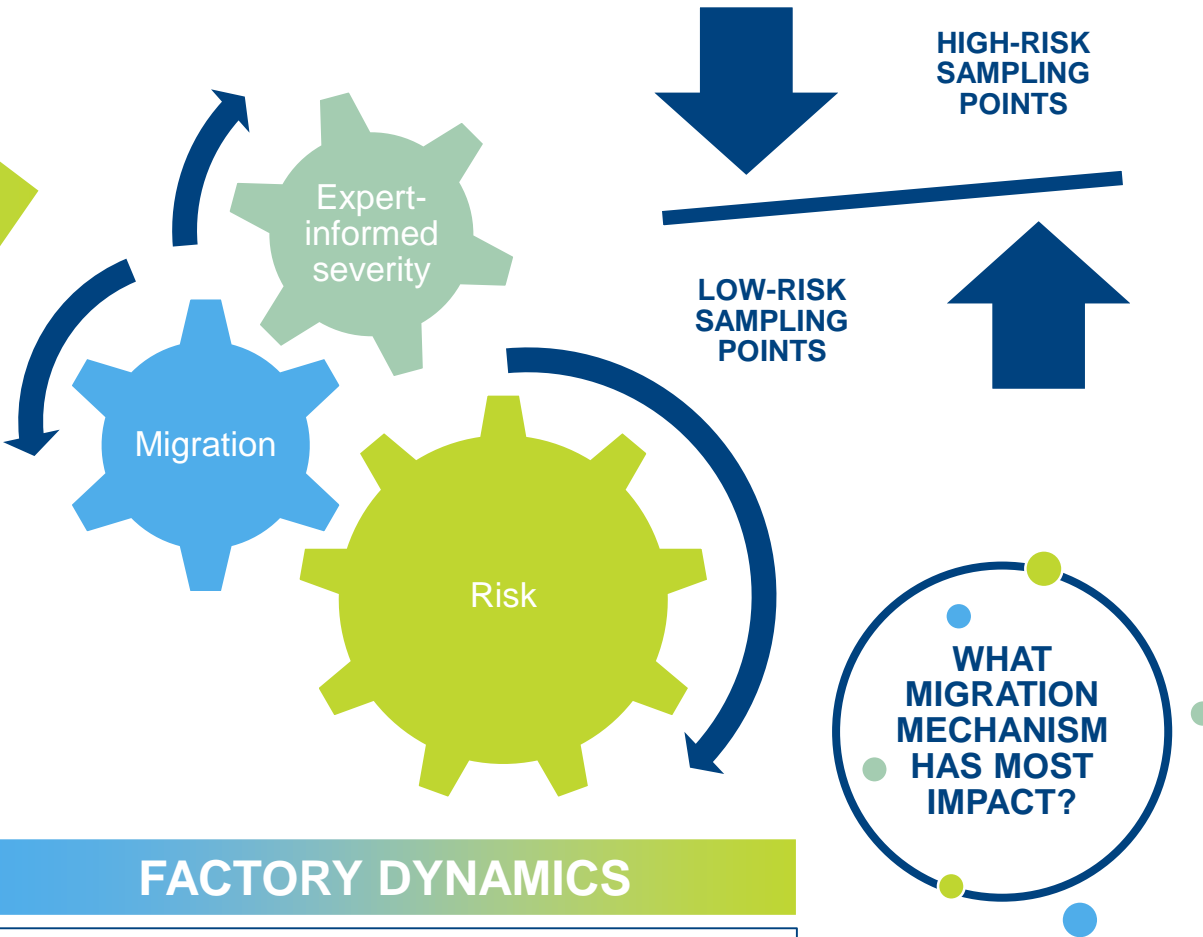

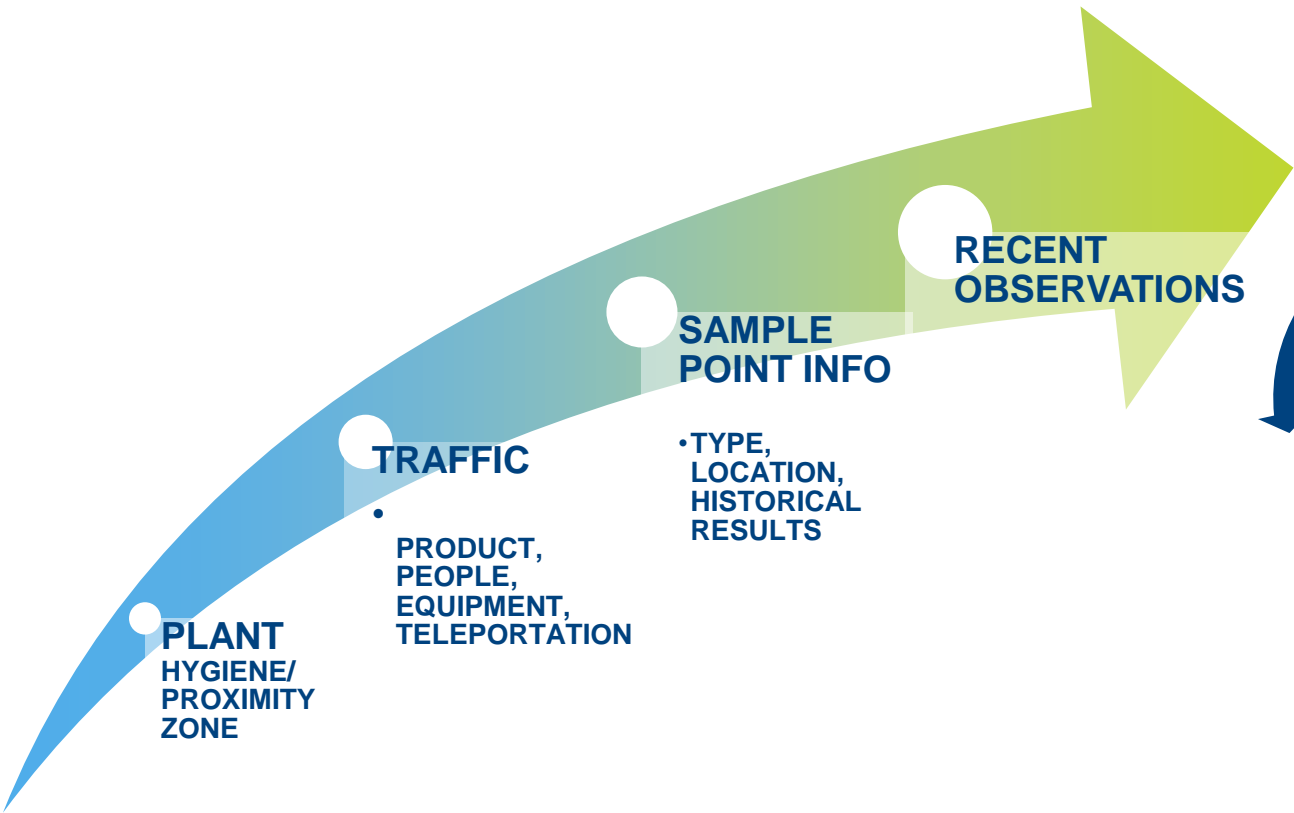

Improvement of time-to-detect through risk-informed sampling

ADAPTIVE SAMPLING

INTELLIGENT SAMPLING

DETECT ISSUES FASTER

FACTORY DYNAMICS

PREVENT FUTURE ISSUES
